

# Aerospace Optics Inc.

*Leading the way in LED switch, indicator manufacturing*

**A**erospace Optics Inc., is one of the world's premier manufacturers of LED pushbutton switches, indicators and electro-optical, programmable displays for avionics, aerospace and defense applications. For the past 40 years, it has helped define the avionics industry, leading the way in product quality and customer satisfaction.

Aerospace Optics is expanding the scope of its business to better meet the needs of its customers. In the past few years, the demand for cutting-edge avionics technology in Europe has grown tremendously. To meet this need, Aerospace Optics added three new sales offices, in France, Italy and the United Kingdom. Aerospace Optics also extended its VIVISUN product line in response to customer requests for a larger LED switch. The new 1 inch-by-1.2 inch, rectangular LED switch — the LR3 — is ideal for master caution and master warning switch applications.

Aerospace Optics also improved customer service standards through the recent re-design of its Web site, VIVISUN.com. The site includes enhanced technical information and special features, such as a part look-up and search capability, which allows customers to view their order history and submit product requests online.

In addition, VIVISUN.com features a configurator that enables customers to spec-design products online, which further streamlines the ordering process.

Aerospace Optics continues to set industry standards. It acquired several new in-house testing capabilities, which will allow it to provide an even higher standard of products and continue expanding its certification status.

"The need for additional testing capabilities is critical in our ability to meet ever-increasing levels of performance requirements and to provide outstanding customer service, especially with the overlap we are seeing in military and civilian aircraft certification," said Craig Morgan, vice president of sales. The company is ISO9001:2000 and

AS9100:2001 Section 1 certified. Its lab is DSCC certified for testing and meets the requirements of MIL-PRF-22885, MIL-S-22885 and MIL-STD-202.
